

SET-1

1. Create a GUI to input patient details. (ID, Name, Age, Disease, Bill Amount)
2. Save records into a database.
3. Load records into a Pandas DataFrame.

(Hint: `df = pd.read_sql_query("SQL Statement / query", conn)`)

4. Display:
 - Total billing per disease
 - Patients above age 60
5. Plot:
 - Bar chart of patients per disease
 - Histogram of patient ages
