

SET-6

1. Create a GUI to input:
(Hospital ID, Patient Name, Disease, Age, Bill Amount)
2. Store the records in a database table.
3. Load data into a Pandas DataFrame from the database.
4. Perform and Display:
 - Total billing per disease
 - Patients above age 60
 - Sort patients by bill amount (descending)
5. Plot:
 - Bar chart of total billing per disease
 - Histogram of patient ages
