

Software Testing Assignment

Project Name: **KeepNotes (Spring Boot)**

Student Name: **Vishal Chudasama**

Roll No: **05**

Division: **A**

1. MANUAL TESTING

Introduction

Software testing ensures application works correctly

Objective

To test KeepNotes application manually

Test Cases

TC_01 – Login Test

Steps:

- Open login page
- Enter email & password
- Click login

Expected: Login successful

Actual: Login successful

Status: Pass

TC_02 – Register User

Steps:

- Open register page
- Enter first name, last name, email, password, number
- Click submit

Expected: User registered successfully

Actual: User registered successfully

Status: Pass

TC_03 – Create Note

Steps:

- Login
- Click “Notes” from navbar or find “Add a Note” heading
- Enter title & note
- Save note

Expected: Note created and displayed

Actual: Note created and displayed

Status: Pass

TC_04 – Edit Note

Steps:

- Login
- Click “Notes” from navbar or find “Your All Notes” heading
- Hover on note & Click edit icon
- Modify content
- Click Save Changes

Expected: Note updated successfully

Actual: Note updated successfully

Status: Pass

TC_05 – Pin Note

Steps:

- Login
- Click “Notes” from navbar or find “Your All Notes” heading
- Hover on note
- Click pin icon on top right

Expected: Note marked as pinned & visible on “Pinned Notes” section

Actual: Note marked as pinned & visible on “Pinned Notes” section

Status: Pass

TC_06 – Change Note Colour

Steps:

- Login
- Click “Notes” from navbar or find “Your All Notes” heading
- Hover on note
- Click colour icon & Select colour

Expected: Note background colour updated

Actual: Note background colour updated

Status: Pass

TC_07 – Delete Note

Steps:

- Login
- Click “Notes” from navbar or find “Your All Notes” heading
- Hover on note & Click Delete icon

Expected: Note deleted and remove that note successfully

Actual: Note deleted and remove that note successfully

Status: Pass

TC_08 – Logout

Steps:

- Click logout button on navbar right side

Expected: User logged out and redirected to login page

Actual: User logged out successfully

Status: Pass

2. AUTOMATION TESTING

Introduction

Automation testing uses tools like Selenium to test applications automatically

Tool Used

- Selenium WebDriver
- Java
- Maven
- Eclipse
- STS

Code Section

TC_1: Login Test

```
public class KeepNotesLoginAutomationTest {
    public static void main(String[] args) {
        System.out.println("KeepNotes Login Automation Test Executed");

        WebDriver driver = new ChromeDriver();

        driver.get("http://localhost:8080/login"); // hit site api

        // Enter login details
        driver.findElement(By.name("email")).sendKeys("vishal@gmail.com");
        driver.findElement(By.name("password")).sendKeys("12345678");

        // Click login
        driver.findElement(By.xpath("//button[@type='submit']")).click();

        try { Thread.sleep(3000); } catch (Exception e){}

        System.out.println("KeepNotes Login Automation Test Done");
        driver.quit();
    }
}
```

Explain: Selenium opens browser, enters data, and performs login automatically.

Expected: Login successfully

Actual: Login successfully

Status: Pass

TC_2: Register Test

```
public class KeepNotesRegisterAutomationTest {
    public static void main(String[] args) {

        System.out.println("KeepNotes Register Automation Test Executed");

        WebDriver driver = new ChromeDriver();

        driver.get("http://localhost:8080/register"); // hit site api

        // Enter Register details
        driver.findElement(By.name("firstName")).sendKeys("Vishal");
        driver.findElement(By.name("lastName")).sendKeys("Chudasama");
        driver.findElement(By.name("email")).sendKeys("vishal3@gmail.com");
        driver.findElement(By.name("password")).sendKeys("12345678");
        driver.findElement(By.name("cPassword")).sendKeys("12345678");
        driver.findElement(By.name("phoneNumber")).sendKeys("9876543210");

        try { Thread.sleep(200); } catch (Exception e){}

        // Click login
```

```

        driver.findElement(By.xpath("//button[@type='submit']")).click();

        try { Thread.sleep(3000); } catch(Exception e){}

        System.out.println("KeepNotes Register Automation Test Done");

        driver.quit();
    }
}

```

Explain: Selenium opens browser, enters data, and performs Register automatically.

Expected: Register successfully

Actual: Register successfully

Status: Pass

TC_2: Create Note

```

public class KeepNotesCreateNewNoteAutomationTest {
    public static void main(String[] args) {
        System.out.println("KeepNotes Create New Note Automation Test Executed");

        WebDriver driver = new ChromeDriver();

        // Login
        driver.get("http://localhost:8080/login");
        driver.findElement(By.name("email")).sendKeys("vishal3@gmail.com");
        driver.findElement(By.name("password")).sendKeys("12345678");
        driver.findElement(By.xpath("//button[@type='submit']")).click();
        try { Thread.sleep(2000); } catch(Exception e){}

        // create note
        driver.get("http://localhost:8080/NotesHome");
        driver.findElement(By.name("title")).sendKeys("SE Automation Test");
        driver.findElement(By.name("description")).sendKeys("This is First
note. By Selenium Automation on 30-04-2026");
        driver.findElement(By.xpath("//button[@type='submit']")).click();
        try { Thread.sleep(3000); } catch(Exception e){}

        System.out.println("KeepNotes Create New Note Automation Test Done");
        driver.quit(); // close Chrome
    }
}

```

Explain: Selenium opens browser, login, enter new note data and performs save automatically.

Expected: New note created and visible

Actual: New note created and visible

Status: Pass
