

Python Practical Test Paper – Set-2

Q1.

Write a Python program to take a string input and check if the string is palindrome or not.

Eg. "madam" , "racecar" , "level" , "stats" , "radar"

Q2.

Take a list of comma separated integers, characters, etc... mixed input from the user.
Remove duplicate elements and display the sorted list of numbers only.

Eg. Input: a, 2, 5.6 , 9 ,c ,4 , 1.5, z6 , 3, u, 2, 5.6, 4

Output: [2, 3, 4, 9]

Q3.

Accept two strings from the user and check whether they are anagrams (using dictionary or set concept.)

Eg.

Input String 1	Input String 2	Output Result Display
listen	silent	S1 and S2 are Anagrams
heart	earth	S1 and S2 are Anagrams
python	Java	Not Anagrams
hello	world	Not Anagrams
